[^]Source: Child Care Aware® of America's January 2020 survey of Child Care Resource and Referral State Networks. Some states used the latest state market rate survey.

^{^^}Source: U.S. Census Bureau, American Community Survey 5-Year Estimates: 2014-2018, Table B19126, <https://data.census.gov/>

* State did not report prices on the 2020 survey; data reported from state's most recent Market Rate Survey.

NR: Data not reported or not available for some categories of care

Note: 1=least affordable and 51=most affordable. Rank is based on price of child care as percentage of state median income for married-couple families. Income is based on single-parent and married-couple families with own children under the age of 18.

^{^^} Sources: Rent- U.S. Census Bureau, American Community Survey 5-Year Estimates: 2014-2018, Table B25064, <https://data.census.gov/>.

Mortgage- U.S. Census Bureau, American Community Survey 5-Year Estimates: 2014-2018, Table 25088, <https://data.census.gov/>.

^{*} State did not report prices on the 2020 survey; data reported from state's most recent Market Rate Survey.

NR: Data not reported or not available for some categories of care

⁺ Child care prices for two children calculated by adding the annual price of infant care to the annual price of care for a 4 year old.

^{**} Percent difference is calculated by subtracting the average price of two children in child care from the annualized housing cost and dividing this figure by the annualized housing cost.

^{^^} Source: Bureau of Labor Statistics, *2019 Annual Mean Wage: Childcare Workers*. <https://www.bls.gov/oes/current/oes399011.htm>

^{**} Child care prices for two children calculated by adding the annual price of infant care to the annual price of care for a 4 year old.

* State did not report prices on the 2020 survey; data reported from state's most recent Market Rate Survey.

NR: Data not reported or not available for some categories of care

Note: 1=least affordable and 51=most affordable. Rank is based on price of child care as percentage of average annual income for child professionals who work in a center setting.

APPENDIX XX

Methodologies Used to Calculate 2019 National Child Care Price Estimates

Methodology #1: “Average of Averages.” The first methodology is simply an average of averages. As an example, if you add the average price of center-based care and the average price of FCC, and divide by two, you’ve calculated an average of averages. This method completely ignores any differences between states, even at the most fundamental level.

Method #1	Center	Home
Infant	\$11,516	\$8,525
Four-year-old	\$9,387	\$8,693
Average	\$10,452	\$8,080
Overall Average	\$9,266	

Methodology #2: “Average of Space-Weighted Averages.” The second methodology is an average weighted by the number of licensed child care spaces reported by a state for each age group and by the type of care. Using these calculated estimates for the number of spaces by age group and program type, average prices were weighted and compiled to produce the overall average.

Method #2	Center	Home
Infant	\$10,762	\$9,083
Four-year-old	\$8,597	\$8,693
Average	\$9,679	\$8,888
Overall Average	\$9,284	

Methodology #3: “Average of Program-Weighted Averages.” In the third methodology, we calculated an overall average by weighting state child care price averages by the number of programs by type (i.e., centers, family child care homes). The average price of child care, by age group, was weighted by the number of programs, by type, reported by each state. Most states reported the number of programs incorporated into their average child care prices, so this method required much less approximation for comparable weighting.

Method #3	Center	Home
Infant	\$11,504	\$9,442
Four-year-old	\$9,039	\$8,472
Average	\$10,722	\$8,957
Overall Average	\$9,614	

None of the above methods is foolproof or ideal for determining one number that would accurately describe how unaffordable child care is for families across the country. Though the three methods produce similar numbers, none of them provides the clarity needed to understand this complex social problem. Prices of a service like child care must be understood in the context of household income, by state and by regions within states.
